ASPECKT

DSpace at Transilvania University >

ASPECKT

is the institutional repository of the Transilvania University of Brasov, Romania, that aims to accommodate all the intellectual work produced by the academic and research staff.

At the moment, it functions as a repository for the doctoral, postgraduate and undergraduate theses that have been elaborated at the Transilvania University of Brasov.

In the future the content will be enriched with technical reports and conference papers, with the ultimate goal ASPECKT to become a thrust for the research activity carried out at the Transilvania University of Brasov.

EIFL-OA: open access

Removing barriers to knowledge sharing

Most research is published in commercial e-journals, but high subscription costs mean that users in developing and transition countries are disadvantaged.

Open access is the immediate, free and unrestricted availability of peer-reviewed, research literature. It provides the means to maximize the visibility and use of research output.

We advocate for open access to promote knowledge sharing.

We are Open

OASIS aims to provide an authoritative 'sourcebook' on [Open Access](#), covering the concept, principles, advantages, approaches and means to achieving it. The site highlights developments and initiatives from around the world, with links to diverse additional resources and case studies. As such, it is a community-building as much as a resource-building exercise. Users are encouraged to share and download the resources provided, and to modify and customize them for local use. Open Access is evolving, and we invite the growing world-wide community to take part in this exciting global movement.

About COAR

COAR, the Confederation of Open Access Repositories, is a young association of repository initiatives launched in October 2009, uniting over 80 institutions in 24 countries from throughout Europe, Latin America, Asia, and North America. Its mission is to enhance greater visibility and application of research outputs through global networks of Open Access digital repositories.

COAR promotes infrastructure interoperability and a joint global data store of Open Access repositories to enable and support the re-use of data by service and portal providers. Currently, COAR has three working groups, each with its own set of responsibilities, objectives, and related activities.
